

Digital Literacy Infographic Project Report

Project Overview

This project created a Canva-based digital literacy infographic for college students. It translates complex data into a visual format to help students find, evaluate, and communicate information responsibly across digital platforms.

Design and Structure

The design utilizes Canva's intuitive interface to maintain a clean aesthetic with a specific palette (Dusty Blue, Coral, Amber) for section differentiation. The content is organized into four pillars:

Pillar	Key Components
Definition	Navigating digital landscapes responsibly.
Tools	Google Scholar, Notion, and Canva.
Security	Passwords, phishing awareness, and privacy.
Etiquette	Professional tone and clear subject lines.

Methodology and Reflections

The process involved synthesizing information and aggressive text reduction to ensure the infographic was "punchy" and skimmable. The main challenge was the editorial balance between density and clarity.

Key Insights

- **Simplicity:** Minimalist text is more effective for visual learners.
- **User Intent:** Students value quick, actionable tips over dense theory.

Conclusion

The infographic serves as a concise guide for modern students, successfully distilling essential digital skills into an accessible format.
