

Digital Literacy Awareness Quiz: Project Report

Assessment Design and Deployment

Prepared by Mayank Anand
March 27, 2026

Project Overview

For this task, a functional assessment tool was designed and deployed using Google Forms and Google Sheets. The "Digital Literacy Awareness Quiz" was specifically tailored for batchmates, focusing on essential modern competencies such as identifying phishing attempts, understanding basic cybersecurity, and managing a digital footprint.

Practical Application

Through the creation of this quiz, professional practice in data collection and management was achieved. The form was linked to a Google Sheet to automate the organization of responses, allowing for a real-time analysis of the general literacy levels of peers.

Tool	Purpose	Key Functionality
Google Forms	Assessment Interface	Diverse question types including multiple-choice and short-answer fields.

Tool	Purpose	Key Functionality
Google Sheets	Data Management	Automated organization of responses and real-time analysis.

The setup involved creating diverse question types, including multiple-choice for quick assessment and short-answer fields to capture more nuanced, qualitative feedback.

Academic Benefits

Mastering these tools is of invaluable academic importance for an undergraduate degree. Frequent needs to conduct surveys for research projects and gather data for technical assignments are expected throughout the course.

- Google Sheets serves as a foundation for data analysis and visualization skills.
- These skills are complementary to development in Python with libraries such as Matplotlib.
- The ability to bridge the gap between user-generated data and structured analysis provides a significant advantage in future coursework and software projects.
